About Us

Labels Lab is an international company with multiple resources in the US and around the world. Our diverse partners have allowed us to offer a competitive price with a fast turnaround time, giving our customers the flexibility they need to ensure that their brand has the highest quality packaging.

Our executives collectively have over 50 years of experience in the printing industry, and since the year 2000 Labels Lab is proud to offer packaging of the highest quality to our customers. Our understanding in branding and commitment to customer service along with the importance of absolute attention to detail allows us to help our customers to focus on growing their business, and leave the packaging side to us.

We import a wide variety of the best raw materials, have state-of-the-art technology and emphasis on strict quality control methods to ensure that the packaging we provide is only of the highest quality. We are certain that there are no shortcuts to achieving the highest quality standards.

Our ultimate goal is to be your packaging partner and support you how ever we can, because in the end of the day we know that we when our customers are successful we are there along with them.

Quick Start

Our minimum is 1,000 units per SKU, depending on the product and size

Speed

Our production turnaround time is 7-10 business days, depending on the product and material

Designers

We have a dedicated team of designers to work directly with your designer to ensure there won't be delays or issues

Consultant

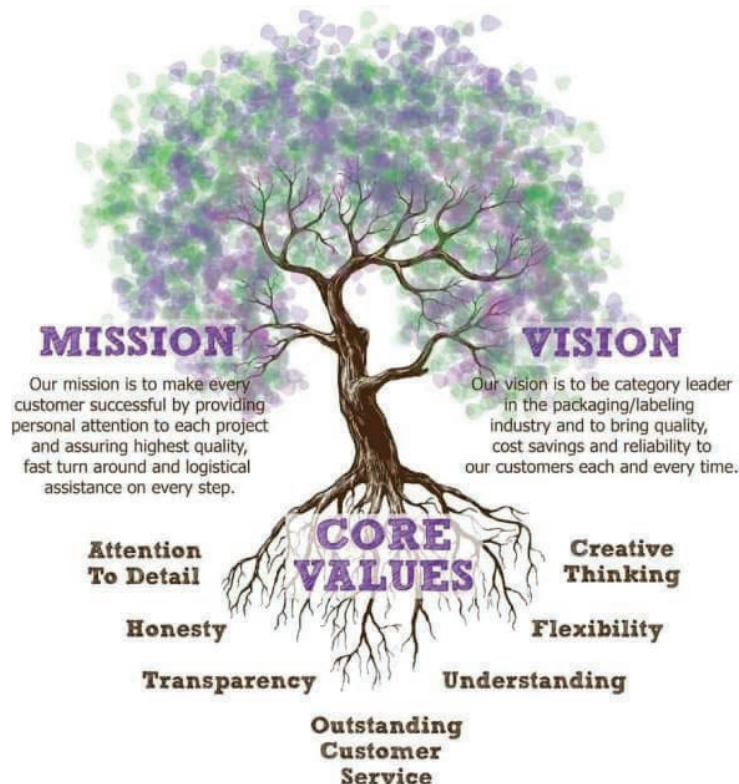

You will have a direct consultant that manage and maintain your project. We are here for you after hours and over the weekend

Cost Effective

We offer you flexibility and significant cost savings

Technology

We offer Digital printing, Flexo-graphic printing and Gravure printing

Contracted solutions

Numeric Variable Data

Variable data printing (VDP) (also known as variable information printing (VIP) or variable imaging (VI)) is a form of digital printing, including on-demand printing, in which elements such as text, graphics and images may be changed from one printed piece to the next, without stopping or slowing down the printing process and using information from a database or external file. For example, a set of personalized letters, each with the same basic layout, can be printed with a different name and address on each letter. Variable data printing is mainly used for direct marketing, customer relationship management, advertising, invoicing and applying addressing on selfmailers, brochures or postcard campaigns.

QR Code Variable Data

QR, or quick response. A QR code is an easy way for anyone with a phone and a scanning app to get to a website without the hassle of typing out the full website address. It is also a great way to quickly get test results or articles to your customer with a quick scan on your phone.

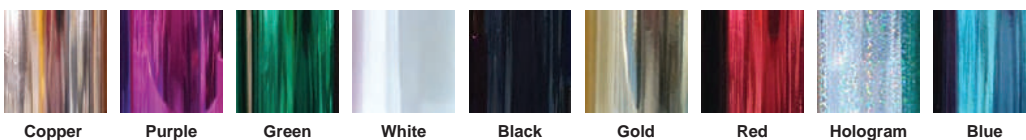

Blank Rolls

Blank rolls are a great option for thermal printers. With the use of special coatings on our great labels we can setup thermal sensitive rolls for your products. Great for printing quick codes, inventory stickers, and test result label on site.

Stamps
